GMT textbook of complete denture prosthodontics pdf -

A bridge is a fixed dental restoration (a fixed dental prosthesis) used to replace one or more missing teeth by joining an artificial tooth definitively to adjacent teeth or dental implants.. A bridge will span the area where teeth are missing. They are attached to the natural teeth or implants that surround this space. The natural teeth or implants which support the bridge are called abutments.

Bridge (dentistry) - Wikipedia - In dentistry, a veneer is a layer of material placed over a tooth, veneers improve the aesthetics of a smile and/or protect the tooth's surface from damage. There are two main types of material used to fabricate a veneer: composite and dental porcelain. A composite veneer may be directly placed (built-up in the mouth), or indirectly fabricated by a dental technician in a dental lab, and later ... Veneer (dentistry) - Wikipedia -
