It extends the methods of vector algebra and calculus from the two-dimensional Euclidean plane and three-dimensional space to spaces with any finite or infinite number of dimensions. A Hilbert space is an abstract vector space possessing the structure of an inner product that allows ... Last update: Nov 17, 2018 at 09:12:27 Fri, 07 Dec 2018 20:54:00 GMT Keith Price Bibliography Geodesic Active Contours - In the mathematical field of topology, a section (or cross section) of a fiber bundle is a continuous right inverse of the projection function. In other words, if  $\pi$  is a fiber bundle over a base space  $B$ ,  $\pi : E \rightarrow B$  then a section of that fiber bundle is a continuous map  $\sigma : B \rightarrow E$  such that  $\pi(\sigma(b)) = b$  for all  $b \in B$ . A section is an abstract characterization of what it means to be a graph.
